YEARS BUILDING

10+

ROLE

Senior Software Engineer

PRODUCTION SYSTEMS

25+

• ABOUT

Engineer at heart, builder by trade.

I'm a Sri-Lankan software engineer who has spent the last decade shipping real systems for real businesses — from enterprise gas distribution platforms and dealer networks to mobile billing apps used daily by delivery teams in the field.

I care a lot about clean architecture, tight feedback loops, and software that doesn't break at 2 a.m. My favourite problems live at the messy intersection of operations, hardware and the web — routing, logistics, payments, and offline-first mobile workflows.

Outside of code, I read about distributed systems, fiddle with tooling, and obsess over good developer experience.

QUICK FACTS

Based in	Athurugiriya, Sri Lanka
Role	Software Engineer · Fixel Inc.
Experience	10+ years full-stack
Education	M.PM · Asia e University
Focus	Web · Mobile · Delivery tech
Open to	Consulting · Contract work

The toolbox.

A focused stack I've sharpened across mobile, web and backend over the years.

01 Frontend & Mobile

Next.js React Framework7
Capacitor Tailwind CSS
TypeScript HTML & CSS

02 Backend & APIs

Node.js Express
REST APIs JWT & Auth
WebSockets CyberSource
Webhook design

03 Data & ORM

MySQL Prisma
SQL modeling Migrations
Indexing & perf Caching

04 Platform & Ops

Vercel Hetzner Cloud
Linux servers Nginx
CI/CD Monitoring

05 Geo & Logistics

Google Routes API
Google Maps APIs OSRM
Geospatial queries
Route optimization
Fleet tracking

06 Integrations

Payment gateways
Thermal printers
SMS providers VideoCipher
Push notifications
3rd-party SDKs

• SELECTED WORK

Things I've built that ship every day.

A focused look at six enterprise platforms — the systems I'm most proud of shipping, running in production today.

01

PRODUCTION • V3 → V4 • 2024 — 2026

Enterprise Gas Distribution Platform

End-to-end platform for a national LP-gas distributor — covering dealers, customers, deliveries, billing and field operations. Architected the v3 backend and led the migration to a v4 admin built on Next.js + Prisma, running across a country-wide dealer network with thousands of daily orders.

Next.js

Framework7

Capacitor

Node.js

Express

MySQL

Prisma

02

GEO • LOGISTICS • 2024 — 2026

Route Intelligence Platform

A routing & dealer-distance engine that powers smart allocation across the delivery network. Combines Google Routes and OSRM with internal heuristics to pick the right dealer, the right route, and the right ETA for every order — with a self-hosted OSRM fallback for cost and resilience.

Google Routes API

OSRM

Node.js

MySQL

03

OPERATIONS • 2024 — 2026

Dealer Network Management Portal

A complete back-office for managing dealers, territories, allocations and performance — the operational heartbeat behind a country-wide home delivery operation. Clean Prisma data model, role-based access, audit trails, and battle-tested workflows used daily by ops teams.

Next.js

Node.js

Express

MySQL

Prisma

Google Maps APIs

04

PAYMENTS • LIVE + SANDBOX • 2024 — 2026

Payment Processing Integration Platform

Secure payment integration on top of CyberSource Secure Acceptance — split into independent live and sandbox gateway services so multiple delivery products could plug in payments without reinventing tokenisation, retries, reconciliation, or webhook handling. Containerised and deployed via Docker.

Node.js

Express

CyberSource

Webhooks

Docker

05

MEDIA • 2024 — 2025

Podcast Media Distribution Platform

A streaming and content-delivery platform for premium podcasts. Secure playback via VideoCipher, subscriber management, episode publishing workflows, and a clean editor experience designed for non-technical content teams.

Node.js

Express

MySQL

Prisma

VideoCipher

Content Publishing CMS

A modern blog and content-publishing CMS — fast Next.js frontend, ergonomic editor experience, Prisma-modelled backend, and a flexible content schema ready for SEO, scheduling and scale.

[Next.js](#)[Node.js](#)[MySQL](#)[Prisma](#)

Other systems I've shipped.

A look at additional products and services across delivery, payments, sports, media, hospitality and ops — many actively running in production today.

RECENT RHYTHM

Selected client engagements (anonymised), 2024 → 2026

- 2026 Customer Engagement Platform
- 2026 Home Delivery Admin · v4
- 2026 Salon Management System
- 2025 Wedding Marketplace & Vendor Portal
- 2025 Fitness & Wellness Platform
- 2025 Brand Management Suite
- 2025 License Management Platform
- 2025 HR Management System
- 2024 CCTV / Camera Admin Platform
- 2024 Premium Podcast Streaming Platform

Customer Engagement Platform

A QR-driven platform with separate admin and end-user apps, sharing a single Express + Prisma backbone.

Node.js Express Prisma
MySQL

Wedding Marketplace & Vendor Portal

Two-sided wedding planning platform — a couples app plus a vendor portal for service providers and bookings.

Next.js Node.js Prisma
MySQL

Fitness & Wellness Platform

Workout and nutrition tracking platform with a Prisma 7 data model and a modern Express-based API.

Node.js Express Prisma 7
MySQL

Salon Management System

Appointments, staff and billing management for salons — scheduling, services, customers and reporting.

Next.js Node.js Prisma
MySQL

HR Management System

In-house HR platform for a delivery operation — employee records, attendance, leave and operational HR workflows.

Node.js Express Prisma 7
MySQL

License Management Platform

Centralised license issuance, renewal and validation system supporting multiple downstream products.

Node.js Express Prisma
MySQL

Brand Management Suite

Multi-tenant brand & campaign management tooling with role-based admin and content workflows.

Next.js Node.js Prisma
MySQL

Cricket Tournament Management

A full cricket-tournament platform — fixtures, scoring, teams, players and live result updates.

Next.js Node.js Prisma
MySQL

CCTV / Camera Admin Platform

Web admin for managing CCTV deployments at scale — devices, dealers, and operational reporting.

Node.js Express MySQL

Customer Mobile Ordering App

Hybrid mobile ordering experience for end customers, talking to the platform via a clean REST API.

Framework7

Capacitor

REST API

Digital Receipt & Billing Platform

Mobile billing app with Bluetooth thermal-printer integration for in-field receipt printing.

Mobile

Thermal Printers

Node.js

Auth & Session Framework

A reusable authentication framework with JWT access tokens and rotating refresh tokens, used across products.

JWT

Refresh Tokens

Node.js

• EXPERIENCE

A decade of shipping software.

• Mar 2016 — Present

Software Engineer • Fixel Inc.

Designed and shipped a portfolio of production systems across delivery, payments, CMS and media — from enterprise gas distribution and dealer networks to mobile billing, route optimization, podcast streaming, and a long list of client builds in hospitality, fitness, sports and SaaS. Owned features end-to-end across backend, frontend and mobile.

- Architected and led delivery for a national LP-gas distribution platform — backend (v3) and the v4 admin migration on Next.js + Prisma — powering thousands of daily orders.
- Built a routing engine combining Google Routes & self-hosted OSRM for dealer allocation and ETAs.
- Integrated CyberSource Secure Acceptance across separate live and sandbox payment gateways for the home-delivery stack, containerised with Docker.
- Shipped hybrid mobile apps using Framework7 + Capacitor for ordering and field billing with thermal-printer integrations.
- Designed an internal HR management system and a centralised license-management service used across multiple downstream products.
- Recent (2025–2026) client builds spanning a customer engagement platform, a two-sided wedding marketplace, a fitness & wellness platform, a salon management system, a brand management suite, a CCTV admin platform, and cricket & rugby tournament platforms.

COLOMBO, LK

• Nov 2015 — Feb 2016

Web Application Developer • Dsquare Technologies

First professional role — built web applications and learned the fundamentals of full-stack development, deployment, and shipping software to real users.
